Information

Please read the following important information before continuing.

When you are ready to continue with Setup, click Next.

--- Installation of Wampserver ---

BEFORE proceeding with the installation of Wampserver, you must ensure that certain elements are installed on your system, otherwise Wampserver will absolutely not run, and in addition, the installation will be faulty and you need to remove Wampserver BEFORE installing the elements that were missing.

Make sure you are "up to date" in the redistributable packages VC9, VC10, VC11, VC13, VC15 and VS16.

See --- Visual C++ Packages below.

--- Do not install Wampserver OVER an existing version, follow the advice:

- Install a new version of Wampserver: <http://forum.wampserver.com/read.php?2,123606>

If you install Wampserver over an existing version, not only it will not work, but you risk losing your existing databases.

--- Install Wampserver in a folder at the root of a disk, for example C:\wamp or D:\wamp. Take an installation path that does not include spaces or diacritics; Therefore, no installation in c:\Program Files\ or C:\Program Files (x86)\

We must BEFORE installing, disable or close some applications:

- **Close Skype** or force not to use port 80
